

VUHTI

WAX TECHNOLOGIES

World’s leading wax technology for over one hundred years

Ski performance has already been improved for hundreds of years, at the beginning with natural materials for example by using tar. In the 1910s, the Vauhti brand was established and its Salaisuus wax was revolutionary at the time, and a technological innovation that significantly improved ski’s glide. The development work that begun from Salaisuus wax laid the foundation for the world’s oldest ski wax company that continues to operate, and which has always been a pioneer in its industry.

Our products and the technology behind them is based on rigorous and long term testing in both laboratory as well as field conditions. We utilize Finnish university excellence and laboratories in our research work. Our product development team have a passion to achieve complete knowledge and understanding of that thin layer between the ski and the snow, where the ski’s performance is optimized in all possible weather conditions. During its history Vauhti has discovered several innovations. The company has succeeded in obtaining several patents, the most recent of which is the raw materials used in Vauhti fluorocarbon free PURE collection.

RESPONSIBILITY BASED ON TECHNOLOGY

We want waxing to be easy and that does not necessarily need separate waxing facilities. Vauhti’s Liquid products are developed with the same accuracy as the wax combinations used by the world’s top skiers. Waxing is no longer a barrier to skiing, and you can enjoy cross-country skiing, downhill skiing, in forests, on mountains and fells.

Respect for man and nature is the basis of all Vauhti’s activities. No one can ignore climate change and environmental issues anymore. Our products are manufactured for snow sport life. It's important for us to bear our responsibility for our environmental and economic footprint. Therefore Vauhti have decided to compensates all the carbon contained in its ski waxes produced since 2015. From 2020 on, Vauhti have decided also to compensate all the carbon dioxide emissions caused by its production and traveling.

Finnish culture, will to win, passion, perseverance, integrity, and the newest technology in the industry - these are the values and starting points from which the Vauhti products that are used by the world’s top skiers, are created.

OUR HISTORY

1912

1930

1960

1990

2010

2020

Vauhti is originally established by Finnish Ski Champion Mr. Eetu Niska who invented Salaisuus wax at 1912 (Salaisuus means Secret in english).

The Legacy of Eetu Niska was maintained by Mr. Aulis Tolsa in 1930's. Aulis also had the passion for skiing and he developed the manufacturing process. The main ingredient was Tar and all the other essential components were gathered from the Finnish nature.

Cooperation between Vauhti and World's top skiers was the essential part of R&D late 1960's. All the famous names in Nordic countries participated to the product development by providing important information.

In 1991 Olympic medalist in X-country skiing Mr. Aki Karvonen acquired Vauhti after Mr. Tolsa's retirement. Karvonen's ultimate goal was to develop the best ski waxes in the world. He started the cooperation with VTT - The Technical Research Centre of Finland to modernize the product range. It became the Fundament of Vauhti Wax technology.

2014 was the year for next Century on the historical timeline of Vauhti. Our target is continuously develop ski wax technology and to take the business to next level. PhD. Esa Puukilainen was hired as Head of R&D to strengthen technological knowhow.

2015 Vauhti invested heavily into the production facilities at Joensuu factory. New automatized production for both liquid and solid glide waxes were installed.

2016 Vauhti started joint research project with Nokian Tyres plc and University of Eastern Finland to guarantee the latest knowhow for product development and to drive innovations to next level. Skin Ski Cleaner and Skin Ski Care products were developed and launched. Patents were granted to these innovated two products later 2019.

2017 Vauhti started partnership with world largest ski manufacturer Fischer Sports GmbH by producing exclusively Fischer Easy Care & Wax Line collection.

2018 Second automatic liquid wax bottling unit was invested, which ensures daily production capacity up to 12.000 bottles.

2019 Vauhti's long-term and systematic product development to find new replacing raw materials for fluorocarbons successfully ended to patent application and launch of fluorocarbon free Pure Collection.

2020 Vauhti Sport & Medi hand sanitizer production starts to fight against COVID-19.

RESEARCH TOGETHER WITH THE UNIVERSITY OF EASTERN FINLAND GUARANTEES A COMPETITIVE ADVANTAGE TO THE WORLD'S OLDEST SKI WAX BRAND

Various materials and their behavior is a key factor in our daily lives. Material surface is typically made of polymers, the properties of which can be controlled and tailored to a wide range of different uses. Surface material performance is often critical to the functionality of the products and their physical and environmental safety. Vauhti Speed Oy engages in continuous research collaboration with the University of Eastern Finland, where the products can be tested in laboratory conditions and environment in order to find smallest factors to improve its characteristics and functionalities.

VAUHTI FACTORY IS LOCATED IN THE CITY OF JOENSUU EASTERN FINLAND WHERE LONG WINTER PROVIDE OPTIMAL TESTING SEASON

TECHNOLOGICAL KNOWHOW AND MODERN PRODUCTION FACILITIES GUARANTEE HIGH QUALITY

The strategic objective of Vauhti is to be a leading operator in the field of wax technology. Vauhti wax factory located in Joensuu Finland and it is the most modern ski wax factory in the world.

Modern equipment and technology will ensure the high quality of the products. Glide waxes and grip waxes are produced in automatic process, wherein each wax will possess optimized production parameters. The automation will monitor the manufacturing processes and casting temperatures of each product at a precision of one tenth of a decimal place. The casting itself is

taken care of by an automatic production robot. The process ensures that the resultant products from a production batch are identical, and prepared and casted exactly at the same temperature.

Vauhti's liquid waxes and products are also manufactured with the same precision. The products are prepared in four completely sealed digitally controlled production reactors, from where they are transferred to two an automatic bottling line.

CARBON COMPENSATION

Vauhti Speed Oy compensates all the carbon contained in Vauhti's ski waxes produced in 2015 to 2019 after a change in ownership.

In 2020, Vauhti continues to annually compensate all the carbon dioxide emissions caused by its production and traveling. The carbon sequestration is provided by Evergreen Finland, who plants and protects forest in the middle and eastern parts of Finland, due to optimal growth conditions.

FINLAND

 **VAUHTI**
CARBON NEUTRAL

"I come from the mountains where nature and snow are an integral part of the living environment. That's why the Vauhti PURE products are not only my choice, but also nature's choice"

- Dorothea Wierer, Biathlon World Cup winner

PROUD PARTNERS OF VAUHTI

SVENSKA SKIDFÖRBUNDET
SWEDISH SKI ASSOCIATION

A GROUNDBREAKING NEW FLUORINE-FREE SKI WAX FOR THE TOP OF THE WORLD

Vauhti's pure collection is a completely new fluorine-free ski wax and care product line that covers product categories up to the race skiers. A cleaner and more responsible ski wax is Vauhti's answer to the needs and values of today's consumers. The Pure collection is a result of long-term and systematic product development for which the company has applied a patent.

The Pure collection is based on completely new and fluorine-free additives. Zinc stearate, polydimethylsiloxane with aliphatic groups, and mixtures thereof improve the performance of hydrocarbon waxes and paraffins used in glide waxes in all snow conditions. Zinc stearate compacts and hardens the ski base, reduces the sliding friction and improves wear resistance, especially in cold and dry snow conditions. Polydimethylsiloxane with aliphatic groups improves the water repellency and the performance of the glide wax in both humid and wet snow conditions.

Chemical nature of the additives enables their processing and complete mixing with the hydrocarbon waxes and hydrocarbon solvents. The amount and ratio of additives as well as the type of wax raw materials can be optimized extensively according to the requirements of different snow types.

GLIDE WAXES

Glide waxes and grip waxes are produced in automatic process, where in each wax will possess optimized production parameters. The automation will monitor the manufacturing processes and casting temperatures of each product at a precision of one tenth of a decimal place. Waxes are based on ingredients from the highest level of chemical research. Modern equipment and technology will ensure the high quality of the products.

PURE RACE POWDERS

PURE RACE glide waxes are processed with powder form raw materials and used as high performance coating powder. High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellence performance and good durability to the products in all weather conditions. Especially for old and artificial snow.

PURE RACE LIQUID GLIDE WAXES

PURE RACE liquid glide waxes can be processed in two steps. First powder form raw materials are homogenized and then processed in organic solvents to give high performance liquids in racing skiing. High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellence performance and good durability to the products in all weather conditions. Especially for old and artificial snow.

32110-PRW80
PURE RACE WET
+10/-1°C | 50/30°F
For wet and damp snow down to zero degrees.

32110-PRM80
PURE RACE MID
+2/-4°C | 36/25°F
For damp snow.

32110-PRC80
PURE RACE COLD
-2/-20°C | 28/-4°F
For cold snow conditions.

32110-PRLDR80
PURE RACE LDR
+5/-10°C | 41/14°F
For wide temperature range and for variable conditions.

PURE PRO LIQUID GLIDE WAXES

PURE PRO glide waxes are intended specifically for competitive skiers and demanding active skiers. High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellence performance and good durability to the products in all weather conditions. Especially for natural snow.

32120-PPW80
PURE PRO WET
+10/-1°C | 50/30°F
For wet and damp snow down to zero degrees.

32120PPM80

- 32140-POLD80
PURE ONE LD
+5/-10°C | 41/14°F
For wide temperature range and for variable conditions.

BASE WAXES

Use liquid base primer regular bases to the new and stone grinded skis and from time to time during the season to get the most benefit and wear resistance from the liquid glide waxes. Liquid base wax doesn't need iron and can be used as a base for other liquid glide waxes and paraffins

- 32330-POB80
PURE ONE BASE WAX
Liquid One base wax contains high quality non-fluorinated polyethylene waxes which makes a hard, dirt-resistant and wear-resistant coating on the ski base under the liquid glide waxes or traditional paraffins.
- 32330-PPB80
PURE PRO BASE WAX
Liquid Pro base wax contains high quality polyethylene waxes and totally new additives makes a hard, dirt-resistant and wear-resistant coating on the ski base

GW UNIVERSAL

PACKAGE SIZES: 80ML | 500ML

Universal fluorocarbon free liquid glide waxes for recreational skiers.

- 341-GWUP80
341-GWUP500
GW UNIVERSAL +
+5/-2°C | 41/28°F
for all snow types, especially on new snow and damp snow.
- 341-GWUM80
341-GWUM500
GW UNIVERSAL -
-2/-15°C | 28/5°F
for all snow types on cold conditions.

LIQUID GRIPS WAXES

Liquid grip waxes are suitable for all snow types and they can be applied on ski base easily without any tools. You get thin and even layer easily with sponge and the waxes are very durable. Apply and let it dry perfectly.

341-LGSBAS
GS BASE SUPER - liquid base grip wax
Durable all temp liquid base wax. Use as base for all other grip waxes.

341-LGSV
GS VIOLET - liquid grip wax
-1/-7°C | 30/19°F
Liquid grip wax for fresh and fine natural snow in mild winter conditions.

341-LGSC
GS CARROT - liquid grip wax
-2/-20°C | 28/-4°F
Liquid grip wax for cold winter conditions. Especially old and man-made snow.

341-LKSBA
KS BASE -liquid base klister
All temp liquid base klister. Use as base for other grip waxes or klisters.

341-LKSU
KS UNIVERSAL - liquid klister
+10/-1°C | 50/30°F
Universal liquid klister for wide range of snow conditions from wet and damp snow to zero degrees.

MAINTENANCE AGENTS FOR ZERO & CROWN SKIS

341-LCGCZ
CLEAN & GLIDE FOR CROWN & ZERO SKIS
Cleaning and maintenance agent for crown & zero skis. Use always when the snow is dirt and wet.

341-LAICZ
ANTI-ICE FOR CROWN & ZERO SKIS
+2/-5°C | 36/23°F
Anti-ice agent for crown & zero skis. Use always on new snow close to zero temperature.

341-LGGCZ
GRIP & GLIDE FOR CROWN & ZERO SKIS
-2/-20°C | 20/-4°F
Grip & glide for crown & zero skis in cold snow.

MAINTENANCE AGENTS FOR SKIN SKIS

Vauhti Skin Ski products have been developed especially to clean and maintain skin skis. The present compositions do not comprise aliphatic and aromatic hydrocarbon solvents as their presence even in small amounts could lead to detachment of the skin strip from the base of the ski. Regular maintenance of the skin strips guarantees the performance and extends the lifetime of the skis. Patents have been granted for both Skin Cleaner (F127921B) and Skin Care (F128011B) products.

341-SSC80
SKIN SKI CLEANER
Unique composition for cleaning skin strips of skin skis from any build-up dirt such as grip waxes from the ski track during ski use.

341-SSCR80
SKIN CARE RED
+10/-5°C | 50/23°F
For wet and dirty snow, also damp snow to zero degrees. It reduces build-up of impurities from the ski tracks to skin strips, and prevents the risk of icing of skin strips, thus maintaining and improving both grip and glide of the skin skis.

341-SSCB80
SKIN CARE BLUE
-2/-20°C | 28/-4°F
For all snow types on cold conditions. It improves the glide on cold and dry snow.

341-SSCC80
SKIN SKI CLEAN & CARE
For cleaning and maintenance of the skin strip of the skin skis.

CLEAN & GLIDE

Cleans effectively the glide zones from dirt and maintains base by creating a hard and dirt-resistant coating.

SYNTHETIC GRIP WAXES (GS)

PACKAGE SIZE: 45G | 1.6OZ

TAR GRIP WAXES (GT)

PACKAGE SIZE: 45G | 1.6OZ

Pit tar, made from Finnish pine, is one of the the raw materials used in the Tar Grip waxes. In addition to the pleasant aroma, tar waxes have a wide operating range and more convenient waxing properties. The waxes are especially suitable for recreational skiers, although their qualities are attractive for even the most demanding racers as well.

SYNTHETIC KLISTERS (KS)

PACKAGE SIZE: 60G | 2.1OZ

GRIP REMOVERS

PACKAGE SIZES: 80ML | 500ML | 1000ML

Grip removers for removing the grip waxes from grip zones.

BASE CLEANER

PACKAGE SIZES: 80ML | 500ML | 1000ML

Base cleaners for cleaning the ski base and surface.
