OUR HISTORY

1912-1950

1951-1991

1992-2013

In 1912, Finnish skiing champion Eetu Niska created the revolutionary Ski Wax "Salaisuus" (Secret), marking the beginning of the Vauhti legacy.

Aulis Tolsa frequently visited Eetu Niska's ski wax factory and under his mentorship, became a skilled wax master. In 1951, Aulis established his own ski wax factory, focusing on developing the manufacturing process. At that time, Tar was the primary ingredient in ski wax alongside other essential components gathered directly from Finnish Nature.

The Vauhti wax range and operations continued growing between 1951 and 1991. Research and Development was a key focus point in the late 1960s. Vauhti developed products in partnership with the World's best skiers. One of the many top athletes supporting Vauhti was Olympic and World Championship medalist Aki Karvonen.

In 1991, Aulis Tolsa retired and offered Aki Karvonen the opportunity to take over the Vauhti business. Aki renamed the company "Vauhti Speed" and began a successful product modernization and development program with the Finnish State Research Institute VTT. Vauhti became a significant player in the world of ski racing and a pioneer in liquid ski wax development. In 2002, the company launched the world's first liquid grip wax, setting the stage for Vauhti's future business plans.

2014-2021

2014: A new chapter began for Vauhti when the company was taken over by a Finnish family enterprise already established in the sporting goods wholesales industry. Esa Puukilainen was also recruited as the new Product Development Director.

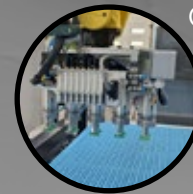

2015-2018: Vauhti made significant investments in its production facilities. By implementing automated bottling lines and robotics, the Vauhti factory became the most modern ski wax production facility in the world, achieving a daily production capacity of up to 12,000 units.

2019: The company's commitment to the development of fluorine-free waxes combined with a thorough systematic product development process, led to the launch of the Fluorocarbon Free PURE collection.

2021: Vauhti successfully released the environmentally friendly 360° series based solely on natural ingredients, including packaging materials and other supplies.

2022-

On November 30th 2021, a fire broke out and destroyed all of Vauhti's production facilities and equipment. A brand-new factory was completed in the Tikkala industrial park in Tohmajärvi in the spring of 2023 accompanied by a product development centre, modern storage facilities, and office spaces.

These new facilities employ all the latest technological innovations with efficient, adaptive, and automated production lines, making it one of the leading techno-chemistry plants for ski waxes and other techno chemical products.

NO COMPROM

OMISE

In a sport where victories are decided by the thinnest of margins, the “no compromise” approach becomes the driving force behind ski racing success. It’s a mindset that fuels the relentless pursuit of perfection, and what ultimately separates champions from the rest.

So, for those seeking glory on the tracks and slopes, remember that in ski racing, there’s no room for compromise, only victory.

That’s how we approach ski waxing, there’s no room for compromise!

GROUNDBREAKING TECHNOLOGY IN A STATE-OF-THE-ART PRODUCTION SITE

Vauhti's strategic objective is to become one of the leading ski wax technology companies. This demands a lot from both the staff and the technical infrastructure.

Vauhti's solid foundations are built on the company's long history and immense practical experience. CTO Esa Puukilainen has a deep theoretical understanding of materials, technology, and chemistry. Only a profound knowledge of such things can make it possible to continuously innovate. All Vauhti's personnel are skilled and motivated, with a drive to continuously learn and develop.

Construction of a new factory was recently completed, in the Tikkala industrial park in Tohmajärvi. Particular attention was paid to energy efficiency and safety during the design and construction of this new production site and all the latest technological innovations have been installed. The objective is to guarantee efficient, adaptive, and automated production lines for ski waxes and other techno chemical products. Modern production systems also ensure the high quality of products and safe manufacturing processes.

Waxes are made using an automated procedure, with each product having its own optimized production parameters. Automated systems monitor the manufacturing processes and casting temperatures of each product at a precision of one-tenth of a unit. The casting itself is managed by an automatic production robot. Liquid products are made in four fully closed digitally controlled production reactors, from which they are taken to an adaptive bottling line to be bottled in their dedicated product bottles.

OUR COMMITMENT FOR SUSTAINABILITY

The premise of Vauhti's operations is respect for people and nature. No one can ignore climate change or environmental concerns any longer. Our goal is to promote sustainability by developing environmentally friendly products. We are a company focused on winter sports and we want to give future generations an equal opportunity to enjoy these activities.

Vauhti's products are designed to make the skiing experience even more enjoyable. Our company, therefore, plays an important role in promoting people's well-being through skiing. Alongside the Finnish specialist organization Lassila & Tikanoja Oy, we developed an environmental and social responsibility program in conformity with ISO 14001 standards.

In 2023, our company was awarded the ISO 14001 certification by the DNV certifying our environmental management system according to international standards. This certification shows that we are aware of, manage and are committed to limiting our environmental impact.

Vauhti's modern production facility optimizes energy efficiency and reduces production-related environmental impacts and safety concerns.

All Vauhti product bottles come with ISO-certified child safety caps.

Vauhti's products are made in compliance with the requirements of the ECHA (European Chemicals Agency) and only use fluorine raw materials that have been approved by ECHA.

Vauhti manufactures and develops fluorine-free and environmentally friendly products and actively works to increase the sales volume of these products.

Vauhti's liquid paraffin waxes last for three times as long as traditional paraffin waxes, thus reducing the company's environmental impact.

Vauhti does not use aerosol-pressurized bottles.

Vauhti includes recycled materials in its product packaging.

Vauhti employs concrete measures to reach carbon neutrality. The company compensates for the carbon dioxide released by the ski waxes and their manufacturing, transport, and electricity use.

All ski wax and care products are made in socially and ethically acceptable conditions at Vauhti's factory in Tohmajärvi.

Vauhti contracts out logistical operations primarily to partners in line with the company's environmental objectives.

Vauhti manufactures durable and high-quality products.

Vauhti uses a dropper and sponge in their product bottles, minimizing environmentally hazardous emissions.

Vauhti sorts and recycles all waste generated during its operations following national and local directives.

Vauhti procurement criteria are made as per the company's environmental initiatives.

VAUHTI **SPEED KING**

RACE

TOP RACE LIQUID

TOP RACE RED liquid is a totally new top coating racing product for all snow disciplines. Especially for wet and humid snow conditions.

Prepare the ski base with RACE line glide wax chosen according to snow conditions. Shake well before use.

Spray TOP RACE RED coating on the entire glide surface, let it dry and you are ready.

60ml

TRL6025
TOP RACE RED
TOP COATING SPRAY
60ML

TOP RACE BLOCKS

Top Race blocs are processed in two steps. First powder from raw materials is homogenized and then compressed into block form creating high-performance coatings for racing skiing. Prepare the ski base with RACE line glide wax chosen according to snow conditions and rub the TOP RACE BLOCK coating on the entire glide surface. Rub with a synthetic cork with fleece and brush with a nylon brush..

RACE LDR GLIDE WAXES

When the durability of waxing matters new RACE LDR is the answer.

The formula of RACE LDRs has been specially developed as the best possible link between the ski base and the glide wax applied on top of LDR. Improves the durability and can also be used on its own in variable snow and weather conditions.

Available in powder, solid and liquid forms. Black version contains molybdenum disulphide.

MAINTENANCE SERIES

Don't let your skis miss out on the care they deserve. Elevate your skiing experience with our Maintenance Series, a comprehensive toolkit that empowers you to maintain your gear like a pro. Discover the difference proper maintenance can make and prepare your skis for every adventure that lies ahead.

CARE CLEAN & GLIDE

Effectively cleans dirt from the glide zone and maintains the base by creating a hard and dirt-resistant coating.

Always start a new waxing by cleaning the ski base with CLEAN & GLIDE. It improves the performance of glide waxes applied on top since ski waxes can only be absorbed by a clean base.

BASE WAX & ALPINE BASE WAX

Liquid base wax should be applied regularly on the glide zone of new and stone-grinded skis, and occasionally during the season.

No heat treatment is required while applying the liquid base wax and it can be used under weather-appropriate liquid glide waxes and solid waxes.

Liquid base wax contains high-quality polyethylene waxes that form a hard, dirt and water-repellent layer on the ski base. Specific content for cross-country skis and alpine skis.

CARE SKIN SKI

Liquid care products have been developed especially for the maintenance of the skin strip of skin skis. The present composition does not comprise aliphatic and aromatic hydrocarbon solvents as their presence even in small amounts could lead to the detachment of the skin strip from the ski base. Regular maintenance of the skin strips guarantees performance and extends the lifetime of the skis. Patents have been granted for both Skin Cleaner (FI127921B) and Skin Care (FI128011B) products.

embracing both adventure and sustainability.

Our Plant-Based Wax Series empowers you to optimize
your ski performance while reducing your ecological
footprint. Discover how you can glide with confidence,
leaving a minimal impact on the environment you love.

360°

Ingredients for 360° glide wax come from vegetal resources with bioethanol used as the solvent.

Sugarcane-based plastic is used in the bottles. Substituting petroleum-based components with nature-based alternatives greatly reduces the environmental footprint of our products, as these natural resources absorb CO2 as they grow.

360° TOOLS

360° Horsehair Brush and Natural Polishing Cloth are perfect tools for sustainable maintenance.

The 360° brush effectively removes excess wax and fine-tunes your base for a flawless glide, while being gentle on both your gear and the environment. The Natural Polishing Cloth is made from soft, natural fibres that offer a smooth, high-gloss finish.

The 360° tools are designed for those who care about their gear and the planet. They ensure your equipment performs at its best while reducing your ecological footprint.
