VUHTI
RESPONSIBLE FOR SPEED

NO COMPROMISE

In a sport where victories are decided by the thinnest of margins, the “no compromise” approach becomes the driving force behind ski racing success. It’s a mindset that fuels relentless pursuit of perfection, and it’s what ultimately separates champions from the rest.

So, for those seeking glory on the tracks and slopes, remember that in ski racing, there’s no room for compromise, only room for victory.

That’s how we approach ski waxing, there’s no room for compromise!

PURE

FLUOROCARBON FREE SERIES

Our Fluorocarbon Free Series offers skiers the dual advantage of superior performance while embracing a responsible approach to skiing that benefits the environment and human health.

PURE

PURE RACE LIQUID GLIDE
OLD SNOW

Pure Race Old Snow liquid glide waxes are processed in two steps. First powder from raw materials is homogenized and then processed in organic solvents to give high performance liquids in racing skiing.

High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellent performance and good durability to the products in all weather conditions. Especially for old and artificial snow.

OUR COMMITMENT FOR SUSTAINABILITY

The promise of Vauhti's operations is respect for people and nature. No one can ignore climate change or environmental concerns any longer. Our goal is to promote sustainability by developing environmentally friendly products. We are a company focused on winter sports and we want to give future generations an equal opportunity to enjoy these activities.

Vauhti's products are designed to make the skiing experience even more enjoyable. Our company, therefore, plays an important role in promoting people's well-being through skiing. In cooperation with the Finnish specialist organization Lassila & Tikanoja Oy, we developed an environmental and social responsibility program in conformity with ISO 14001 standards. We aim to become fully compliant with these standards in 2023 through a systematic management system and procedural policy.

GROUNDBREAKING TECHNOLOGY IN A STATE-OF-THE-ART PRODUCTION SITE

Vauhti’s strategic objective is to become one of the leading ski wax technology companies. This demands a lot from both the personnel and the technical infrastructure.

Vauhti’s solid foundations are built on the company’s long history and immense practical experience. CTO Esa Puukilainen has a deep theoretical understanding of materials, technology, and chemistry. Only a profound knowledge of such things can make it possible to continuously innovate. All Vauhti’s personnel are skilled and motivated, with a drive to continuously learn and develop.

Construction of a new factory was recently completed, in the Tikkala industrial park located in Tohmäjärvi. Particular attention was paid to energy efficiency and safety during the design and construction of this new production site and all of the latest technological innovations have been installed. The objective is to guarantee efficient, adaptive, and automated production lines for ski waxes and other techno-chemical products. Modern production systems also ensure the high quality of products and safe manufacturing processes.

Waxes are made using an automated procedure, with each product having its own optimized production parameters. Automated systems monitor the manufacturing processes and casting temperatures of each product at a precision of one-tenth of a unit. The casting itself is managed by an automatic production robot. Liquid products are made in four fully closed digitally controlled production reactors, from which they are taken to an adaptive bottling line to be bottled in their dedicated product bottles.

PACE

SYNTHETIC SERIES

The heart of our Synthetic Series lies in its innovative formulation. We have harnessed technology to create waxes that are optimized for consistent performance, giving you a competitive edge every time and in any weather conditions.

PACE

PACE RC SPEED LIQUID GLIDE

Pace RC Speed liquid waxes are based on ingredients from the highest level of chemical research used in UF series combined with top coatings.

All these together give the products high speed racing performance, high hydrophobicity and superb durability. Ski performance can be further improved by coating RC SPEEDS with suitable top coating.

PACE UF LIQUID GLIDE

Pace UF liquid glide wax is intended specifically for competitive skiers and demanding active skiers. High-quality hydrocarbon ingredients, hard paraffins, and carefully selected additives give excellent performance, good durability, and dirt resistance to the products in all weather conditions. Especially for old and artificial snow.

80ml

PACE

PACE FC SPEED POWDER & BLOCK

FC SPEED products have superb characteristics. They minimize the surface energy of the ski base, making it super-hydrophobic and dirt-repelling. At the same time, they are excellent in cold conditions to reduce dry friction. The speed, glide sensitivity, and durability of these glide waxes are excellent in all weather conditions.

With versatile application methods every skier will benefit, even the lightweight skiers. FC SPEED products are made in purified raw materials to comply with ECHA regulations on fluorocarbon substances, PFOA < 25 ppb.

PACE GW LIQUID GLIDE

Fluorocarbon free Pace GW waxes are intended for recreational and active skiers in all snow types as well as for base preparation and maintenance for racing.

Easy and enjoyable waxing. GW liquids have thinner content than other liquid glide waxes which means faster evaporation time and easier to brush.

80ml

PACE SW SERVICE WAX

Pace SW glide waxes to maintain base material of all skis and snowboards packed in 900 g carton box (5 x 180 g).

900g

PACE GF GRIP WAX

The Excellent performance of GF-Line fluorinated grip waxes comes from a revolutionary ingredient that reacts to temperature precisely. Thanks to this innovation, the risk of the grip wax icing in sub-zero temperatures is reduced considerably and the grip properties are exceptional. GF-Line grip waxes have a wide operation range, which makes them a good choice also for recreational skiers.

PLANT BASED SERIES

Experience skiing in harmony with the environment, embracing both adventure and sustainability. Our Plant-Based Wax Series empowers you to optimize your ski performance while reducing your ecological footprint. Discover how you can glide with confidence, leaving a minimal impact on the environment you love.

360° LIQUID GLIDE

Ingredients for 360° products come from vegetal resources and bioethanol is used as the solvent.

Sugarcane-based plastic is used in the bottles. Substituting petroleum-based components with nature-based alternatives greatly reduces the environmental footprint of our products, as these natural resources absorb CO2 as they grow.

CARE

MAINTENANCE SERIES

Don't let your skis miss out on the care they deserve. Elevate your skiing experience with our Maintenance Series, a comprehensive toolkit that empowers you to maintain your gear like a pro. Discover the difference proper maintenance can make and prepare your skis for every adventure that lies ahead.

CARE SKIN SKI

Liquid care product, which has been developed especially for maintenance of the skin strip of the skin skis. The present composition does not comprise aliphatic and aromatic hydrocarbon solvents as their presence even in small amounts could lead to detachment of the skin strip from the base of the ski. Regular maintenance of the skin strips guarantees the performance and extends the lifetime of the skis. Patents have been granted for both Skin Cleaner (FI127921B) and Skin Care (FI128011B) products

CARE CLEAN & GLIDE
LIQUID GLIDE

Effectively cleans the glide zones from dirt and maintains base by creating a hard and dirt-resistant coating.

Always start a new waxing by cleaning the ski base with CLEAN & GLIDE. It improves the performance of the glide waxes on top of it since ski waxes are only absorbed by a clean base.

OUR HISTORY

1912-1950

Vauhti is originally established by Finnish Ski Champion Mr. Eetu Niska who invented Salaisuus wax at 1912 (Salaisuus means Secret in english).

The Legacy of Eetu Niska was maintained by Mr. Aulis Tolsa in 1930's. Aulis also had the passion for skiing and he developed the manufacturing process. The main ingredient was Tar and all the other essential components were gathered from the Finnish nature.

1951-1991

Cooperation between Vauhti and World's top skiers was the essential part of R&D late 1960's. All the famous names in Nordic countries participated to the product development by providing important information.

1992-2013

In 1991 Olympic medalist in X-country skiing Mr. Aki Karvonen acquired Vauhti after Mr. Tolsa's retirement. Karvonen's ultimate goal was to develop the best ski waxes in the world. He started the cooperation with VTT - The Technical Research Centre of Finland to modernize the product range. It became the Fundament of Vauhti Wax technology.

2014-2021

2014 marked the beginning of a new chapter in Vauhti's history. Our target is continuously developing ski wax technology and to take the business to next level. PhD. Esa Puukilainen was hired as Head of R&D to strengthen technological knowhow.

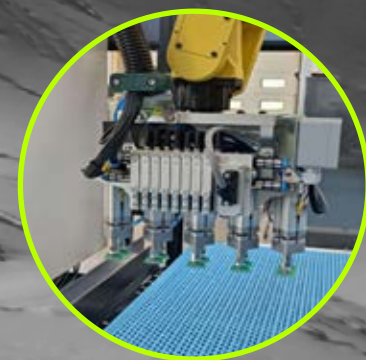

2015 Vauhti invested heavily into the production facilities. New automatized production for both liquid and solid glide waxes were installed.

2018 Vauhti invested in a second automatic liquid wax bottling unit, which brought the daily production capacity up to 12.000 bottles

2019 Vauhti's long-term and systematic product development led to launch of fluorocarbon free Pure Collection.

2021 Vauhti Launch successfully new environmental friendly 360 wax series where more than 90% of the composition of the final product from natural based materials.

2022-

On November 30, 2021, a fire broke out in Vauhti's production facilities, which destroyed the production facilities and equipment of the factory that was only a few years old. A completely new factory building was completed in the spring of 2023 in Tohmajärvi. Vauhti's new factory has utilized the latest technological innovations, which guarantee efficient and adaptive robotics and production lines for ski waxes and various techno chemical products.
