

PURE RACE LIQUID GLIDE OLD SNOW

Pure Race Old Snow liquid glide waxes are processed in two steps. First powder from raw materials is homogenized and then processed in organic solvents to give high performance liquids in racing skiing.

High-quality hydrocarbon ingredients, zinc stearate and silicon wax gives excellent performance and good durability to the products in all weather conditions. Especially for old and artificial snow.

OUR COMMITMENT FOR SUSTAINABILITY

The promise of Vauhti's operations is respect for people and nature. No one can ignore climate change or environmental concerns any longer. Our goal is to promote sustainability by developing environmentally friendly products. We are a company focused on winter sports and we want to give future generations an equal opportunity to enjoy these activities.

Vauhti's products are designed to make the skiing experience even more enjoyable. Our company, therefore, plays an important role in promoting people's well-being through skiing. In cooperation with the Finnish specialist organization Lassila & Tikanoja Oy, we developed an environmental and social responsibility program in conformity with ISO 14001 standards. We aim to become fully compliant with these standards in 2023 through a systematic management system and procedural policy.

GROUNDBREAKING TECHNOLOGY IN A STATE-OF-THE-ART PRODUCTION SITE

Vauhti's strategic objective is to become one of the leading ski wax technology companies. This demands a lot from both the personnel and the technical infrastructure.

Vauhti's solid foundations are built on the company's long history and immense practical experience. CTO Esa Puukilainen has a deep theoretical understanding of materials, technology, and chemistry. Only a profound knowledge of such things can make it possible to continuously innovate. All Vauhti's personnel are skilled and motivated, with a drive to continuously learn and develop.

Construction of a new factory was recently completed, in the Tikkala industrial park located in Tohmäjärvi. Particular attention was paid to energy efficiency and safety during the design and construction of this new production site and all of the latest technological innovations have been installed. The objective is to guarantee efficient, adaptive, and automated production lines for ski waxes and other techno-chemical products. Modern production systems also ensure the high quality of products and safe manufacturing processes.

Waxes are made using an automated procedure, with each product having its own optimized production parameters. Automated systems monitor the manufacturing processes and casting temperatures of each product at a precision of one-tenth of a unit. The casting itself is managed by an automatic production robot. Liquid products are made in four fully closed digitally controlled production reactors, from which they are taken to an adaptive bottling line to be bottled in their dedicated product bottles.

Don't let your skis miss out on the care they deserve. Elevate your skiing experience with our Maintenance Series, a comprehensive toolkit that empowers you to maintain your gear like a pro. Discover the difference proper maintenance can make and prepare your skis for every adventure that lies ahead.

CARE SKIN SKI

Liquid care product, which has been developed especially for maintenance of the skin strip of the skin skis. The present composition does not comprise aliphatic and aromatic hydrocarbon solvents as their presence even in small amounts could lead to detachment of the skin strip from the base of the ski. Regular maintenance of the skin strips guarantees the performance and extends the lifetime of the skis. Patents have been granted for both Skin Cleaner (FI127921B) and Skin Care (FI128011B) products

VAUHTI

1912-1950

1951-1991

1992-2013

2014-2021

2022-

Vauhti is originally established by Finnish Ski Champion Mr. Eetu Niska who invented Salaisuus wax at 1912 (Salaisuus means Secret in english).

The Legacy of Eetu Niska was maintained by Mr. Aulis Tolsa in 1930's. Aulis also had the passion for skiing and he developed the manufacturing process. The main ingredient was Tar and all the other essential components were gathered from the Finnish nature.

Cooperation between Vauhti and World's top skiers was the essential part of R&D late 1960's. All the famous names in Nordic countries participated to the product development by providing important information.

2014 marked the beginning of a new chapter in Vauhti's history. Our target is continuously developing ski wax technology and to take the business to next level. PhD. Esa Puukilainen was hired as Head of R&D to strengthen technological knowhow.

2015 Vauhti invested heavily into the production facilities. New automatized production for both liquid and solid glide waxes were installed.

2018 Vauhti invested in a second automatic liquid wax bottling unit, which brought the daily production capacity up to 12.000 bottles
